Recommended actions

1. **Touch targets too small.** Fix the affected elements as described in the axe-core guidance.
2. **Main content identical to another page.** Consolidate duplicates with a 301 redirect or a canonical to the preferred URL.
3. **Duplicate title across pages.** Give each page a unique title.
4. **Page scrolls horizontally on the tested viewport.** Constrain the widest element (tables, images, embeds) with max-width:100% or responsive wrappers.
5. **No mobile viewport meta tag.** Add <meta name="viewport" content="width=device-width, initial-scale=1">.

EVIDENCE

How findings are evidenced

Every finding records what was observed so a developer can reproduce it. Sensitive parameters are redacted before storage.

Methodology

Pages are discovered from robots.txt, sitemaps and internal links. HTTP checks run on every fetched page; browser checks (performance, accessibility, tags, forms, UX, consent) run on a stratified sample. Issues are grouped by rule and inferred page template and ranked by a transparent priority index: severity × reach × confidence × importance.

Limitations

- Automated checks cannot establish legal compliance (privacy, consent, accessibility) or guarantee ranking, traffic or conversion outcomes.
- Performance numbers are Lighthouse lab measurements, not real-user field data.
- Tags gated behind consent, logins, ad blockers or later user actions may not be observed.
- 1 URL(s) were excluded by robots.txt and not audited.
